

**Imagine a constant,
high-pitched ringing
in your ears, day and
night, with no relief.**

**For someone suffering
from tinnitus this is a reality.**

**Did you know an audiologist
can help with that?**

Tinnitus is the perception of sound without an external source. It can sound like ringing, whooshing, hissing, clicking, humming, buzzing, pulsing or chirping. Audiologists provide specialized care and evidence-informed interventions to help manage symptoms and bring relief.

Make an audiologist a part of your care team.
